

**REPORT
OF
DATA SCIENCE INTERNSHIP**

**Submitted To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.**

In partial fulfilment of the requirement of degree of
B.Tech CSE

By
Roll Number: CS-2341863
Name of Student: PRASANT KUMAR CHOUDHARY
Batch: 2023-27

2026-27

CANDIDATE'S DECLARATION

I, **PRASANT KUMAR CHOUDHARY**, do hereby declare that the internship report titled "**DATA SCIENCE INTERNSHIP**" has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering.

I affirm that this report presents the work and learning undertaken by me during my internship at **DailyKaam**. The report has been prepared for academic submission as part of the B.Tech CSE curriculum at IILM University, Greater Noida.

I shall be solely responsible for any kind of copyright violation or misrepresentation in this report.

Student Name: PRASANT KUMAR CHOUDHARY

Roll No.: CS-2341863

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout my internship in Data Science at **DailyKaam**. The internship provided me with practical exposure to data-oriented workflows and helped me connect academic concepts with practical tasks.

I am thankful to the team and mentors at DailyKaam for providing guidance and an opportunity to work on data collection, data cleaning, exploratory data analysis (EDA), data visualization, statistical analysis, machine learning model development, SQL-based data extraction and manipulation, and dashboard creation.

I would also like to thank the School of Computer Science and Engineering, IILM University, Greater Noida, for providing me the opportunity to undertake this internship as part of my B.Tech CSE curriculum and for the continuous academic support and encouragement.

Finally, I express my heartfelt gratitude to my parents, friends and everyone who encouraged me throughout the internship period.

Date: 24 July 2026

CERTIFICATE OF INTERNSHIP

TO WHOMSOEVER IT MAY CONCERN

This is to certify that **Mr. Prasant Kumar Choudhary**, a student of **IILM UNIVERSITY, Greater Noida**, Roll Number **CS-2341863**, has successfully completed his **Data Science Internship** with DailyKaam during the period **02 June 2026 to 24 July 2026**.

During his internship, he actively worked on data collection, data cleaning, exploratory data analysis (EDA), data visualization, statistical analysis, machine learning model development, and building predictive models using Python. He also worked with SQL for data extraction and manipulation and created insightful dashboards to support data-driven decision making.

He demonstrated strong analytical skills, problem-solving abilities, dedication, and a willingness to learn throughout the internship. He was hardworking, punctual, and completed all the assigned tasks with sincerity.

We appreciate his efforts and contributions to the organization and wish him continued success in his academic pursuits and future professional career.

Internship Duration: 02 June 2026 – 24 July 2026

For DailyKaam

4. Project Description

4.1 Introduction

This report presents the work carried out during the Data Science Internship at **DailyKaam** from **02 June 2026 to 24 July 2026**. The internship focused on practical data science activities, including collecting and preparing data, exploring datasets, performing statistical analysis, creating visualizations and dashboards, working with SQL, and developing predictive machine learning models.

The internship helped develop an end-to-end understanding of how raw data can be transformed into structured information, analysed to identify patterns, and presented through visual and dashboard-based outputs to support data-driven decision making.

4.2 Organization / Internship Profile

The internship was undertaken with **DailyKaam**, located in Kanpur, Uttar Pradesh, India. As stated in the internship completion certificate, the internship role was focused on Data Science. The work involved practical exposure to data collection, data cleaning, exploratory analysis, visualization, statistical analysis, machine learning and SQL-based data handling.

4.3 Problem Statement

Raw datasets often contain missing, inconsistent or unstructured information and cannot directly be used for reliable analysis. A structured data science workflow is therefore required to collect and clean data, explore its characteristics, perform statistical analysis, build predictive models where appropriate, and communicate findings through meaningful visualizations and dashboards.

4.4 Project Objectives

- To understand and apply the complete data science workflow from data collection to insights.
- To perform data cleaning and preprocessing on datasets.
- To conduct exploratory data analysis (EDA) and statistical analysis.
- To create clear and informative data visualizations and dashboards.
- To use SQL for data extraction and manipulation.
- To gain practical exposure to machine learning model development and predictive modelling.
- To strengthen analytical, problem-solving and technical documentation skills.

4.5 Scope of the Internship

The scope of the internship covered practical and guided work in core Data Science activities. It included data collection and cleaning, exploratory and statistical analysis, visualization, SQL operations, dashboard development, and machine learning model development. The completion certificate does not specify a particular production application or proprietary dataset, so this report does not attribute any specific business dataset, model accuracy or deployed system beyond the documented activities.

4.6 Technologies and Tools Used

- **Python:** Used for data analysis, processing and machine learning-related tasks.
- **SQL:** Used for data extraction and manipulation.
- **Data Analysis Tools:** Used for cleaning, exploratory analysis and statistical analysis.
- **Data Visualization:** Used to communicate patterns and analytical findings.
- **Machine Learning:** Used for model development and predictive modelling.
- **Dashboards:** Created to present data-driven insights in a structured form.

4.7 Data Science Workflow

The internship activities can be organised into the following practical workflow:

- **1. Data Collection:** Gather relevant data required for analysis.
- **2. Data Cleaning:** Identify and handle inconsistencies so that the data becomes suitable for analysis.
- **3. Exploratory Data Analysis:** Examine distributions, relationships and patterns within the data.
- **4. Statistical Analysis:** Apply statistical techniques to understand the characteristics of the dataset.
- **5. Visualization:** Convert analytical findings into understandable charts and visual representations.
- **6. SQL Operations:** Extract and manipulate data using SQL queries.
- **7. Machine Learning:** Develop predictive models where applicable and analyse their outputs.
- **8. Dashboarding:** Present relevant insights through dashboards to support data-driven decisions.

This workflow represents the activities explicitly documented in the internship completion certificate and provides a structured view of how the different tasks connect within a Data Science process.

4.8 Methodology

The internship followed a practical, task-oriented methodology. Work progressed from preparing data to analysing it, developing predictive models and communicating the resulting insights.

Phase 1 – Data Collection and Preparation

The first stage involved collecting relevant data and preparing it for analysis. Data cleaning was performed to improve consistency and usability before analytical tasks were undertaken.

Phase 2 – Exploratory and Statistical Analysis

Exploratory Data Analysis (EDA) was used to understand the structure and characteristics of the data. Statistical analysis supported the identification and interpretation of patterns and relationships.

Phase 3 – Data Visualization

Analytical findings were represented visually so that trends, comparisons and patterns could be communicated more effectively. Visualization also formed a basis for dashboard development.

Phase 4 – SQL Data Handling

SQL was used for data extraction and manipulation. This provided practical exposure to working with structured data through query-based operations.

Phase 5 – Machine Learning Model Development

The internship also included machine learning model development and predictive modelling. The focus was on gaining practical exposure to the modelling stage of a data science workflow rather than claiming a particular model, dataset or performance metric not stated on the certificate.

Phase 6 – Dashboard Development

Dashboards were created to organise and communicate insights in a form useful for data-driven decision making. This stage connected technical analysis with practical presentation of results.

4.9 Learning Outcomes

- Developed practical understanding of data collection and data cleaning.
- Gained hands-on exposure to exploratory data analysis and statistical analysis.
- Improved ability to communicate analytical findings through data visualization.
- Gained practical experience in SQL-based data extraction and manipulation.
- Developed an understanding of machine learning model development and predictive modelling.
- Improved dashboard-building skills for presenting data-driven insights.
- Strengthened analytical thinking, problem-solving, punctuality, dedication and willingness to learn.

The internship completion certificate specifically records that the internship involved data collection, data cleaning, EDA, data visualization, statistical analysis, machine learning model development, Python-based predictive modelling, SQL for data extraction and manipulation, and dashboard creation. These activities collectively provided practical exposure to the main stages of a Data Science workflow.

4.10 Internship Completion Certificate

The internship completion certificate issued by **DailyKaam** confirms the successful completion of the Data Science Internship by **Prasant Kumar Choudhary** for the period **02 June 2026 to 24 July 2026**. The original certificate is attached in Section 3 of this report.

Internship Duration: 02 June 2026 – 24 July 2026

Organization: DailyKaam

Internship Domain: Data Science
